## Seen at SEMA

The crowd prepares to head into the Central Hall for the 2008 SEMA show at the Las Vegas Convention Center. Despite tough economic times, SEMA is a must see. You are conspicuous in your absence.

## SO MUCH TO SEE, SO LITTLE TIME

By Larry Jewett

**In the days leading up to the annual SEMA show in Las Vegas, we heard it from every corner. There will be fewer vendors. There will be fewer attendees. It's all because of the economy.**

I really don't think too many people noticed. Aisles were crowded. Fewer attendees and fewer displays meant more quality time. After all, SEMA is our "Field of Dreams." Build it and they will come.

We came, we saw, and we were impressed. If you missed out on the SEMA show in 2008, you'll have a little catching up to do. Don't worry, it's a service we'll provide as we found 25 cool parts and that's just scratching the surface. There was enough to keep you busy for all three days.

**Improved visibility is critical for night driving. The Rayzer, developed by Visualey, was developed in Europe and recently introduced to U.S. consumers. The Rayzer is an interior-mounted light system that supplements the work of your headlights. The location behind the rear view mirror offers benefits from a higher mounting position and HID Xenon bulbs, creating a wider field of brighter light and restoring peripheral vision. Tests have shown visibility to increase by up to 300 percent over standard headlamps. The Rayzer is adjustable and wirelessly synchronized to the car's lighting system.
